A graph in which each graph edge is replaced by a directed graph edge, also called a digraph. A directed graph having no multiple edges or loops (corresponding to a binary adjacency matrix with 0s on the diagonal) is called a simple directed graph. A complete graph in which each edge is bidirected is called a complete directed graph. A directed graph having no symmetric pair of directed edges ...

A Hamiltonian graph, also called a Hamilton graph, is a graph possessing a Hamiltonian cycle. A graph that is not Hamiltonian is said to be nonhamiltonian. A Hamiltonian graph on n nodes has graph circumference n. While it would be easy to make a general definition of "Hamiltonian" that goes either way as far as the singleton graph K_1 is concerned, defining "Hamiltonian" to mean "has a ...

Graphing Quadratics (Parabolas) Before we talk specifically about the Vertex and Factored forms,

let's first create a t-chart so we can graph the simplest form of a parabola, which is $y = x^2$. Note that parabolas have symmetry; it is a mirror image of itself across the vertical line (called the line of symmetry, or LOS, or sometimes called the axis of symmetry) that contains its vertex.

With a little practice, you may get pretty good at spotting the cube roots of easy numbers. For example, $\sqrt[3]{8} = 2$, $\sqrt[3]{27} = 3$ and so on. But when it comes to finding cube roots for larger numbers, or finding exact values for cube roots that don't work out to a whole number, a scientific calculator becomes a very useful tool.
