In the context of artificial neural networks, the rectifier is an activation function defined as the positive part of its argument:  $\max(x, 0)$ , where  $x$  is the input to a neuron. This is also known as a ramp function and is analogous to half-wave rectification in electrical engineering. This activation function was first introduced to a dynamical network by Hahnloser et al. in 2000 with strong ...

The use of "^" and "\$" as indicators of the beginning or end of a line is a convention other utilities use. The vi editor uses these two characters as commands to go to the beginning or end of a line. The C shell uses "!^" to specify the first argument of the previous line, and "!" is the last argument on the previous line.
