Paul J. Planet, in Principles and Practice of Pediatric Infectious Diseases (Fifth Edition), 2018 Microbiology. *Pseudomonas aeruginosa* is a gram-negative bacillus found widely in nature, in soil and water. Classified as an opportunistic pathogen, *P. aeruginosa* causes disease infrequently in normal hosts but is a major cause of infection in patients with underlying or immunocompromising conditions.

Proteus mirabilis and *P. vulgaris* are motile, urease-positive, lactose-negative, indole-negative, gram-negative rod-shaped bacterial species of the family Enterobacteriaceae. They deaminate phenylalanine and produce abundant hydrogen sulfide. These species, which can differentiate from short vegetative cells to elongated, highly flagellated forms, are found in soil, water and the human ...

Carers play a vital role in supporting family members who are sick, infirm or disabled. 1 There is no doubt that the families of those with mental disorders are affected by the condition of their near ones. Families not only provide practical help and personal care but also give emotional support to their relative with a mental disorder.

The human vagina is an elastic, muscular canal that extends from the vulva to the cervix. The opening of the vagina lies in the urogenital triangle. The urogenital triangle is the front triangle of the perineum and also consists of the urethral opening and associated parts of the external genitalia. The vaginal canal travels upwards and backwards, between the urethra at the front, and the ...

The DSM-IV-TR classifies conversion disorder as one of the somatoform disorders which were first classified as a group of mental disorders in 1980 in the DSM III.. The new description of somatic symptom disorder in DSM-5 represents a big step forward, because the decision has been made to use, for classification, a positive criterion, namely maladaptive reaction to a somatic symptom, instead ...
